# 3 Barriers to Overcome on The Road to Intelligent Connectivity

What if you could continuously monitor business conditions, automatically identify changes and quickly respond to risks and opportunities?

It's no easy feat, but you can do it if you connect your **data, applications, processes** and **people** in the cloud. Learn how to overcome the top three challenges application owners face on this journey.

## 1 Manage disparate data & apps

### The challenge

The average organization uses **200+ applications.** Navigating the resulting data and application silos requires a significant amount of time and manual effort.

### The solution

Find a platform that connects your software and on-premises applications in real time using out-of-the-box connectors and no/low code tools.

## 2 Connect siloed workflows

### The challenge

If you have multiple applications with disconnected workflows, completing complex processes can take a lot of time and manual effort. This undermines your team's productivity and collaboration, increases costs and makes it difficult to optimize operations.

### The solution

Your best bet is to identify a tool that can effortlessly create a sequence of tasks, business rules and decision logic.

## 3 Overcome data discrepancies

### The challenge

Modernizing apps in the cloud could mean changes to your data model, which may lead to data inconsistencies.

### The solution

You can evaluate and resolve data quality issues early in your cloud migration with solutions that offer automated data discovery and profiling. This helps you easily map your legacy app's data model to your cloud one.

**Discover how intelligent connectivity improves productivity and drives business outcomes.**
