

Manage a Simplified Chart of Accounts for the Enterprise

Technology should make it easier to report, plan, and forecast, and enable finance users to stop their reliance on emails, phone calls, and spreadsheets.

For many organizations, the chart of accounts offers a lot of room for improvement. By automating the management of your chart of accounts, you can drive better results.

Accuracy of internal and external reporting

Successful execution of business transformation initiatives

Better visibility into trusted data for planning, analysis, and forecasting

Timely assessments of business performance and decisions

71% of CFOs¹

Are concerned about liquidity and cash management.

76% of CFOs²

Agree without one version of the truth they will struggle.

How technology helps simplify CoA

By adopting a centralized approach, organizations can:

Ensure consistent and standard representation across the enterprise.

Enforce governance and change management during onboarding of finance data including hierarchies and crosswalks.

Streamline CoA segment changes with workflow-based approval process, and capture audit and revision history.

Finance 360 solution from Informatica offers:

Rich business-user-driven interface for self-service management of CoA, hierarchies, and crosswalks.

Workflow-based approval process for creation and modification of CoA.

Full audit, history, and side-by-side comparison of finance hierarchies and alternate business perspectives.

All-in-one SaaS solution designed to integrate, govern, and centrally manage finance data.

Unleash the power of your financial data
