

Informatica Cloud Hybrid Architecture Assessment

Architecting the Next Generation of Data Integration

Benefits

- Review and assessment of your enterprise data integration landscape
- Guidance in areas where leveraging Informatica Cloud can reduce costs and speed the time to value for Data Integration with both on-premise and cloud applications
- Architecture plan and roadmap for leveraging both Informatica on-premise and cloud integration technologies in a hybrid architecture for maximum benefit

Typical Duration

- 1 Week

Key Program Details

Informatica provides a variety of methods to integrate data within on-premise systems and via cloud based technology. Many organizations began with a simple PowerCenter integration for on-premise data integration needs. As the organization has grown so has the need to integrate more varied sources of data. Some applications have moved to the cloud requiring cloud to on-premise integration. Often, various departments implement one-off extracts and integration methods for departmental reports and extracts. The IT organization is likely struggling to keep up with all of the demands for data integration across the organization and trying to maintain at least visibility of the data movement activities.

With this package the Informatica Professional Services (IPS) team will review your current integration platform and document the current state. From there we will review upcoming integration needs, your cloud based technologies, as well as your data integration challenges and departmental integration needs. During this effort our experts will review these findings and provide a roadmap and plan for areas where leveraging Informatica Cloud Integration technologies can help your organization.

Used correctly, Informatica Cloud can help you to provide data integration capabilities to a broader audience in your organization. We can show you how you can put a tool in the hands of non-IT staff that will allow them to generate one-off integrations that are based upon the Informatica Vibe Platform; allowing your IT department to retain visibility and control of these efforts should a time come to bring them back under IT ownership.

We can show you how using Informatica Cloud technologies can speed initial development for new projects and efforts without requiring full on-premise installation and configuration, thereby speeding your ability to prototype and begin initiatives more quickly.

Areas of Focus

This is a one business week engagement that covers the review, documentation and recommendations for expanding your IT Data Integration architecture to include both on premise and cloud based solutions. The goal is providing a plan for implementing a hybrid integration architecture.

Task	Week 1
Review and document existing Data Integration Architecture	X
Review and document Cloud based solutions and integration needs	X
Review and document data integration project challenges	X
Develop and document recommendations for a Hybrid Integration Architecture	X
Review and Present the Hybrid Architecture plan and next steps	X

Key Program Deliverables

Week 1 – Cloud Hybrid Architecture Assessment

- Review of existing Integration Architecture
- Review of cloud based solutions and integration needs
- Review of future integration needs and challenges
- Review of non-IT departmental based integration needs
- Deliverable: Hybrid Architecture Recommendations
- Review and present the Hybrid Architecture recommendation and roadmap

About Informatica

Informatica is a leading independent software provider focused on delivering transformative innovation for the future of all things data. Organizations around the world rely on Informatica to realize their information potential and drive top business imperatives. More than 5,800 enterprises depend on Informatica to fully leverage their information assets residing on-premise, in the Cloud and on the internet, including social networks.
