

Enterprise Metadata Management Express

Benefits

- Build a foundation of trusted data
- Enable business users to discover and access all data across the entire enterprise for analytics use
- Enable business analysts to prepare trusted data to accelerate business insight delivery and better decisions

Typical duration

- 8 weeks

The first step to managing your data as an enterprise asset is to take inventory of it, assess its value, and maximize its use—just like you do other significant capital and operational investments. Data is diverse and distributed across many different departments, locations, systems, and platforms (some on-premise and some in the cloud), making it challenging to know exactly what data you have. And in the world of big data this becomes even more difficult.

With this Express offering the Informatica Professional Services team will assist you in reviewing your big data challenges to ensure that current technology features are matched to meet your big data requirements.

Our experienced consultants will review your business drivers and use cases, aligning on a specific scope to comprise a Phase One pilot. We will help you drive your initial work plan by designing the solution strategy, installing and configuring a technical platform, and building out the associated work product. The primary goal is to deliver a production-ready Phase One pilot.

ABOUT INFORMATICA

Digital transformation is changing our world. As the leader in enterprise cloud data management, we're prepared to help you intelligently lead the way. To provide you with the foresight to become more agile, realize new growth opportunities or even invent new things. We invite you to explore all that Informatica has to offer—and unleash the power of data to drive your next intelligent disruption. Not just once, but again and again.
