

Informatica Data Archive with Exterro Fusion E-Discovery Software Suite

Centralize E-Discovery Preservation Using Informatica® Data Archive with Exterro Fusion

Benefits

- Improve efficiency while lowering risk of preservation failure
- Decrease time and cost of e-discovery across all datatypes
- Reduce noncompliance and related penalties

Informatica Data Archive with Exterro Fusion streamlines e-discovery and eliminates risks with in-place preservation filters for both unstructured and structured content.

Increasingly stringent regulations require IT organizations to retain inactive data for extended periods. To manage this additional data for legal e-discovery and review purposes, compliance officers, records managers, and attorneys need more powerful tools that preserve data of all types — unstructured, semi-structured, and structured — in both enterprise applications and databases.

Informatica Data Archive and the Exterro Fusion® E-Discovery Software Suite work together to provide a single point of control for data stored in Informatica Data Vault. Data can be specified and put on legal hold in place across a wide range of data sources, streamlining the e-discovery process while reducing noncompliance risks.

The joint solution simplifies enforcement and tracking of legal holds, automatically creates an audit trail, and releases holds as soon as preservation requirements are lifted. The solution's precise filter criteria help avoid costly excessive preservation of data. By authoritatively managing multiple potentially overlapping holds associated with multiple matters, it also reduces confusion that can lead to unauthorized data releases and fines for noncompliance.

Key Features

Robust Archiving Support and Search

Archive structured data in databases, data warehouses, and enterprise applications, as well as related unstructured content to a secure, highly compressed archive. View, search, and report on archived data through a powerful data discovery portal that uses standard SQL/ODBC/JDBC interfaces and existing reporting or business intelligence tools.

Easy Data Retention and Legal Hold Creation and Management

Assign retention policies to different classes of archived data to readily apply legal holds to records relevant to legal procedures and audits while automatically purging other expired records after review and approval. Manage holds with a full notice library of templates, dynamic tags, and email links, plus automated distributions, reminders, and escalations.

In-Place Preservation

Automatically incorporate suspension of document retention policies into the legal hold process and create an audit trail that links legal holds with preservation actions to demonstrate that retention policies have been suspended and reinstated as required.

Key Benefits

Reduce Time and Costs Associated with E-Discovery Across All Datatypes

Fast and accurate identification of custodians and data sources – both structured and unstructured content – potentially related to a matter improves search efficiency, lowers overall legal costs, and eliminates the need for cumbersome “collect-to-preserve” projects.

Decrease Risk of Noncompliance and Related Penalties

Consistent legal hold language, repeatable workflows, integrated auditing, and reporting and strict adherence to global data privacy directives decrease the risk of noncompliance and related fines. In-place preservation eliminates spoliation risk without increasing collection demands.

Lower Infrastructure Costs

Informatica Data Archive’s consolidated, highly compressed, secure data archives reduce IT hardware and infrastructure requirements. Exterro’s in-place preservation capability eliminates associated “orphaned” legal holds that unnecessarily consume IT system resources.

About Informatica

Informatica Corporation (Nasdaq:INFA) is the world’s number one independent provider of data integration software. Organizations around the world rely on Informatica to realize their information potential and drive top business imperatives. Informatica Vibe, the industry’s first and only embeddable virtual data machine (VDM), powers the unique “Map Once. Deploy Anywhere.” capabilities of the Informatica Platform. Worldwide, over 5,000 enterprises depend on Informatica to fully leverage their information assets from devices to mobile to social to big data residing on-premise, in the Cloud and across social networks.

About Exterro, Inc.

Exterro, Inc. is the leading provider of workflow-driven e-discovery software. Recognized as a “leader” in Gartner’s 2013 Magic Quadrant for E-Discovery Software, the Exterro Fusion® delivers a complete view into the critical data and workflows required for defensibly and proactively managing e-discovery across all phases of e-discovery – from identification, legal hold and early case assessment (ECA) to collection, processing, analysis, review and production. The open architecture in the Exterro Fusion® Platform enables seamless integration with existing business processes and enterprise infrastructures.
