Optimizing Business Performance Through Master Data Governance and Architectural Innovations

- Srinivasa Gopal, Principal Solution Architect, CSA
- Dilip Yeluguri, Principal Solution Architect, CSA

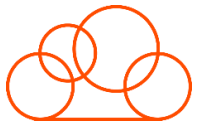

Where data & AI come to **LIFE**

Housekeeping Tips

- Today's Webinar is scheduled for **1 hour**
- The session will include a webcast and then your questions will be answered live at the end of the presentation
- All dial-in participants will be muted to enable the speakers to present without interruption
- Questions can be submitted to "All Panelists" via the **Q&A option** and we will respond at the end of the presentation
- The webinar is **being recorded** and will be available on our [Success Portal](#) - where you can download the **slide deck** for the presentation. The link to the recording will be emailed as well.
- Please take time to complete the **post-webinar survey** and provide your feedback and suggestions for upcoming topics.

Top Business Imperatives for Data Leaders

¹ High performing data delivery organizations compared to low-performing organizations.
Data Trust Survey, IDC, December 2021, n=500

How Do I Empower One Organization to Achieve Data-Driven Outcomes?

Is budget data **accurate** for making investment decisions?

91%

Predict increases in **data sources** for analytics, cloud stores, applications

Can sales analyze **trustworthy** data to optimize territory coverage?

50%

Predict they need **5 or more** separate tools to manage complete data management priorities

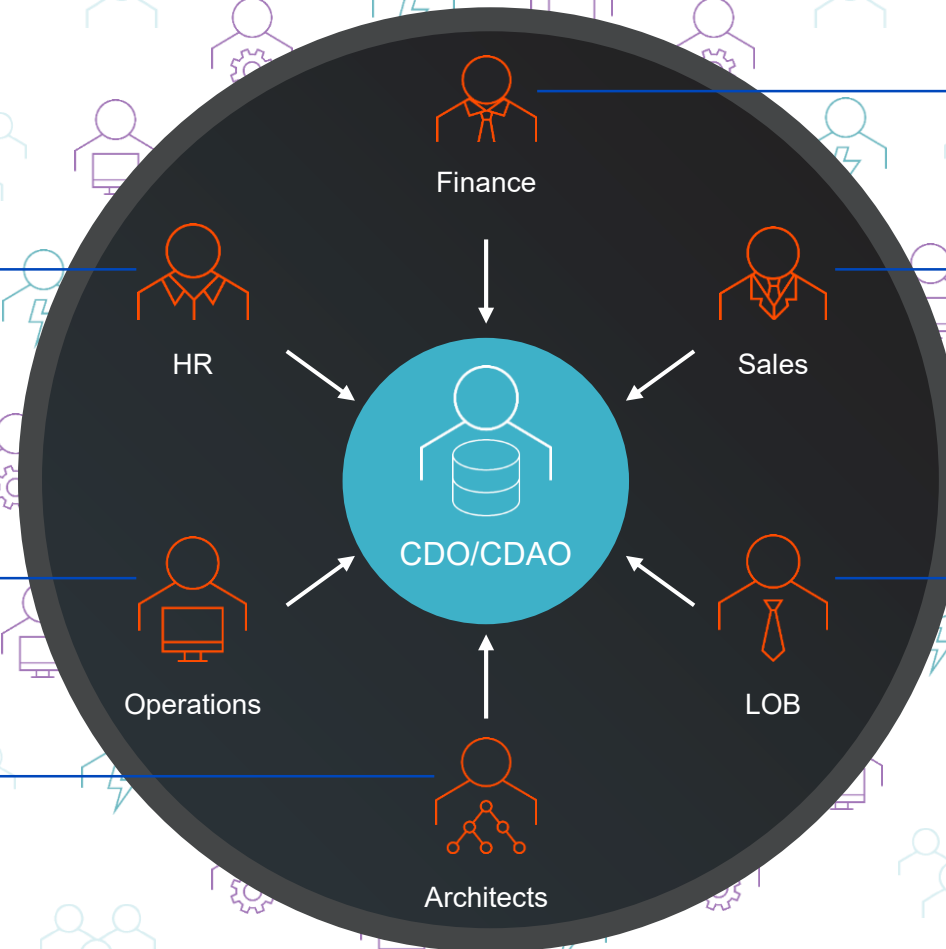

45%

Plan to prioritize **more holistic or single views** of customers or business entities

Does HR get **reliable** salary data to plan where best to hire?

Can operations **timely** analyze its warehouse stock for supply chains issues?

Can we connect disparate sources to deliver business **relevant** data to the org?

What are your business imperatives?

Challenges to Effectively Governing Data

1

Identifying Unknown Data Sources & Types

- Too much time spent on data discovery and preparation
- Too many silos with unclassified and uncategorized data
- Last mile data delivery challenges

2

Improving Low Trust in Data Accuracy

- Only 27% of data practitioners completely trust their data¹
- “Trust in data degrades as it moves further away from its origin”²
- Rigid, manual documentation-based approaches do not scale

3

Enabling Responsible Data Use

- Only 33% of consumers believe that personal data is being used responsibly³
- Evolving regulatory policies require ongoing investments and effort to control access
- Manual governance does not scale easily across data lakes

Fulfill & Track

Enable: Master Data

Cleanse, standardize, enrich a reliable source of trusted data for analytics and AI

- Built-in integration and broad connectivity to easily onboard master data from enterprise-wide sources
- Data quality checks, enrichment and remediation to ensure trusted data for operational and analytical use
- Relationship management between domains and graph visualization with AI-powered matching algorithms to reduce tuning from days to hours
- Guided workflows to simplify collaboration and process orchestration, including custom domains using an intuitive screen with smart fields

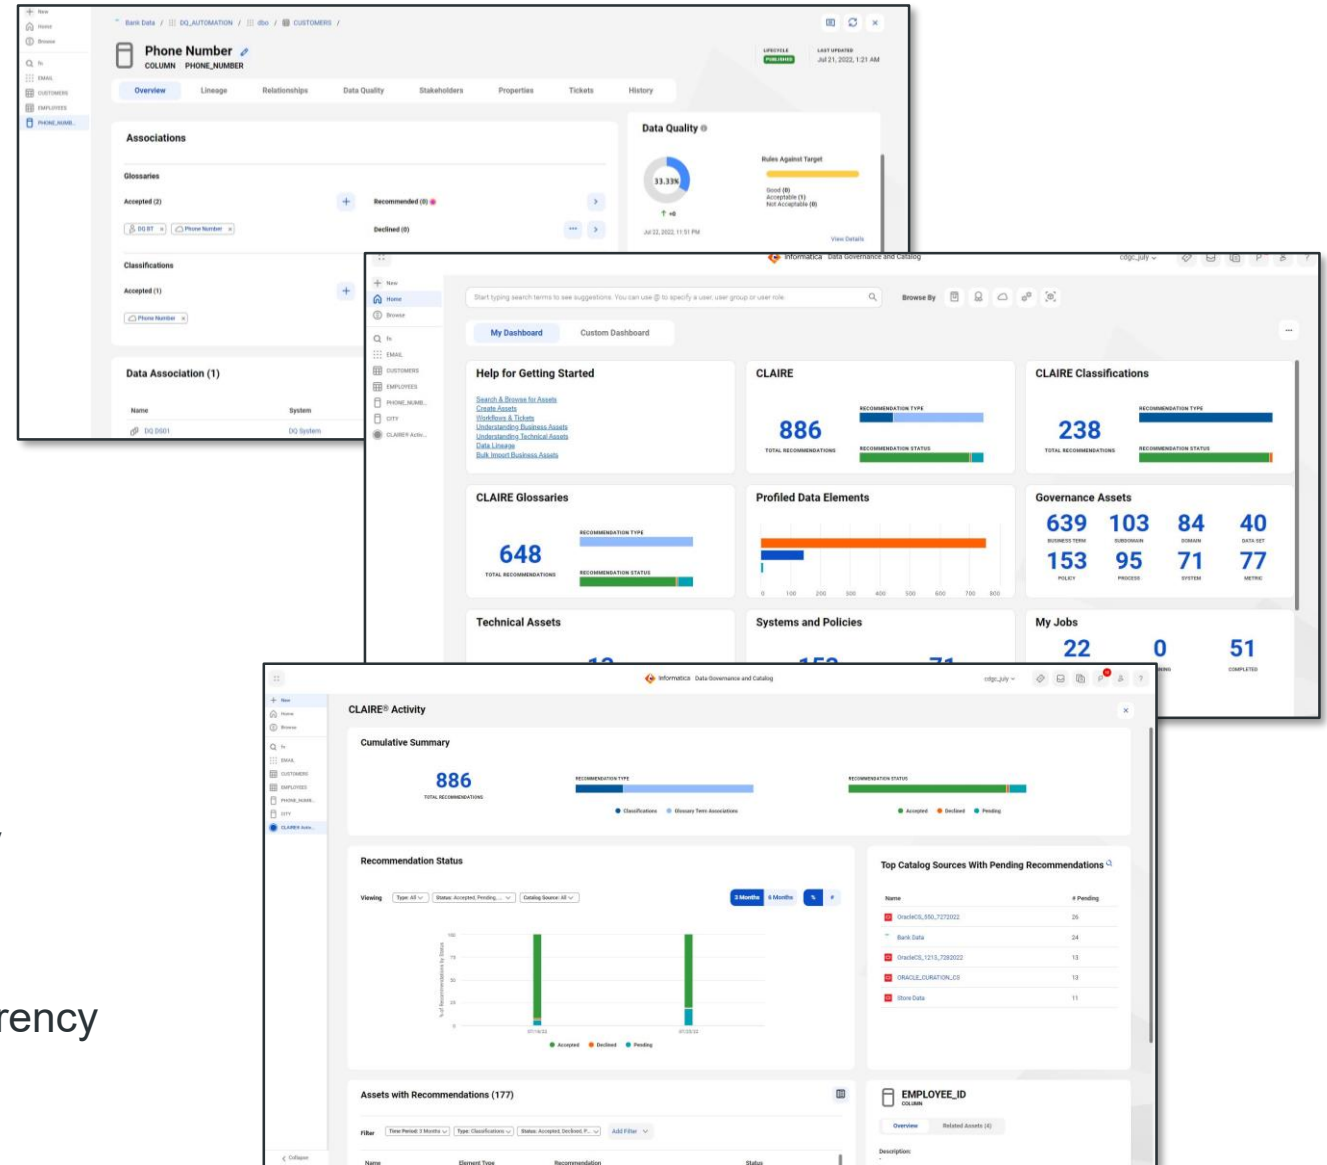

Master Data

Manage: Responsible Data Use

Find and catalog critical
data fragmented across
organizational silos

- Metadata-driven insights powered by AI / ML to provide contextual graphical understanding
- Technical metadata auto-classified and linked to business assets for increased insights & usability
- Automatic glossary association, data quality and profiling with inferred lineage to increase transparency

Master Data and Govern End-to-End

Definitions enable consistency across your organization

Policies align data use to mandates and regulation

Rules execute and enforce policies for proper use

Cataloging enables an understanding of data types

Mapping allows data lineage for data flow insights

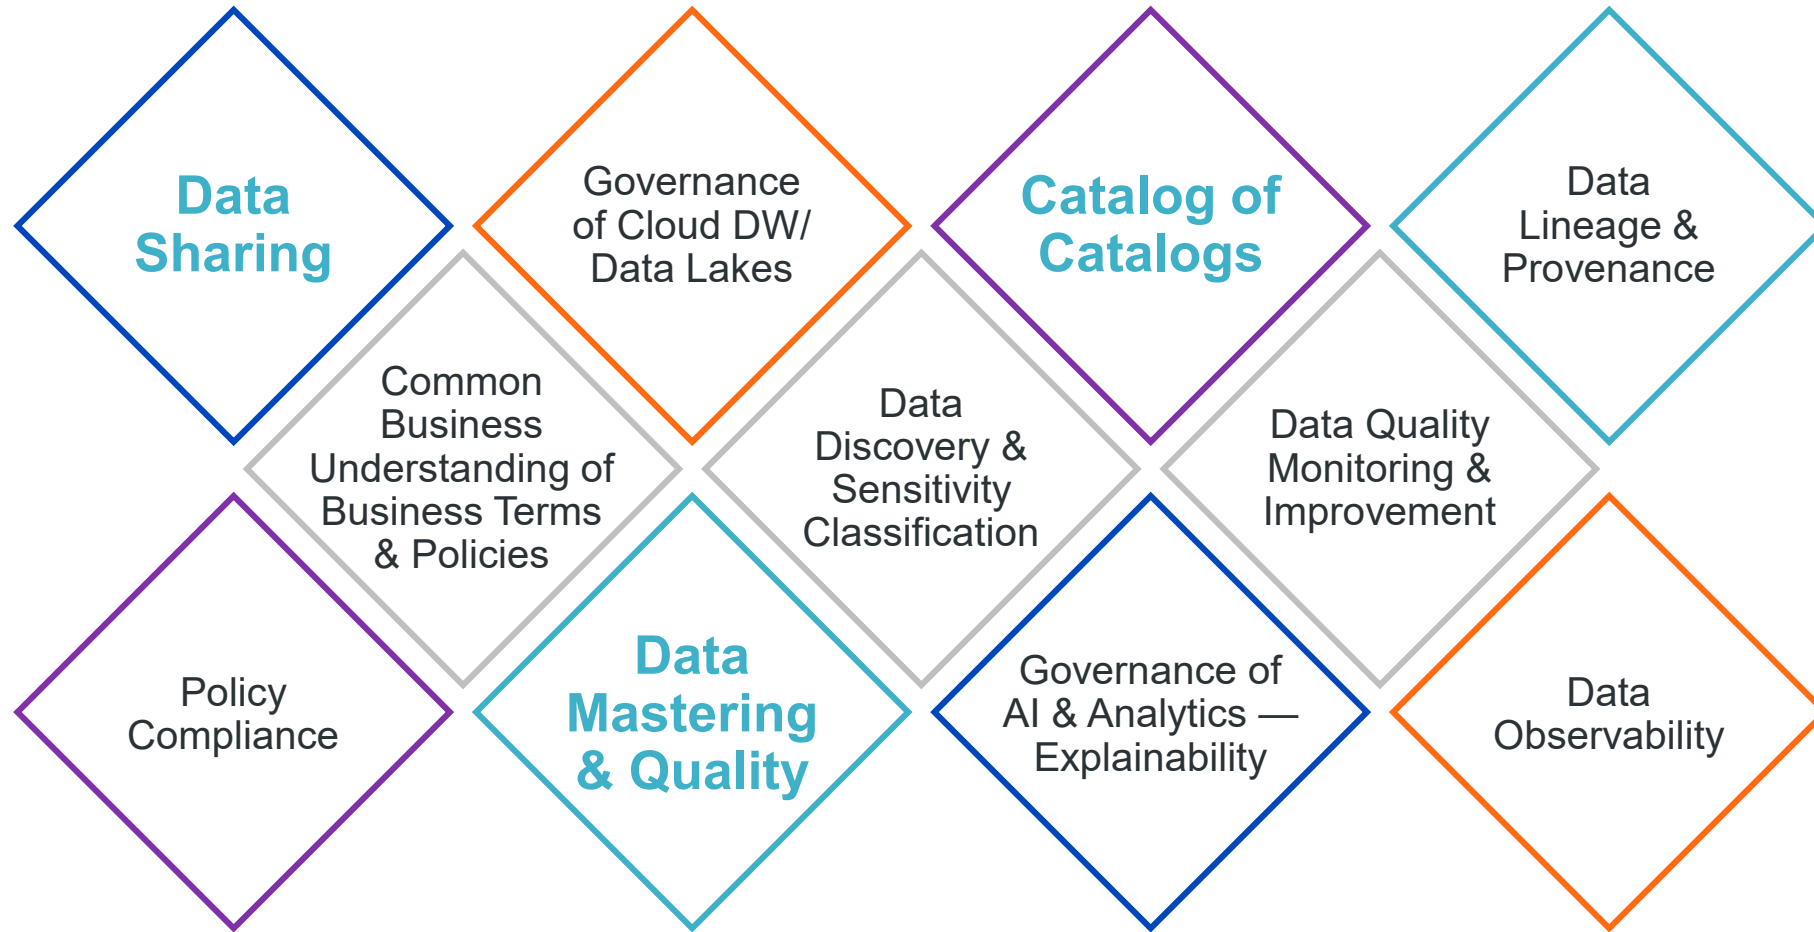

Identity allows visibility into data users

Workflow visibility enables collaboration

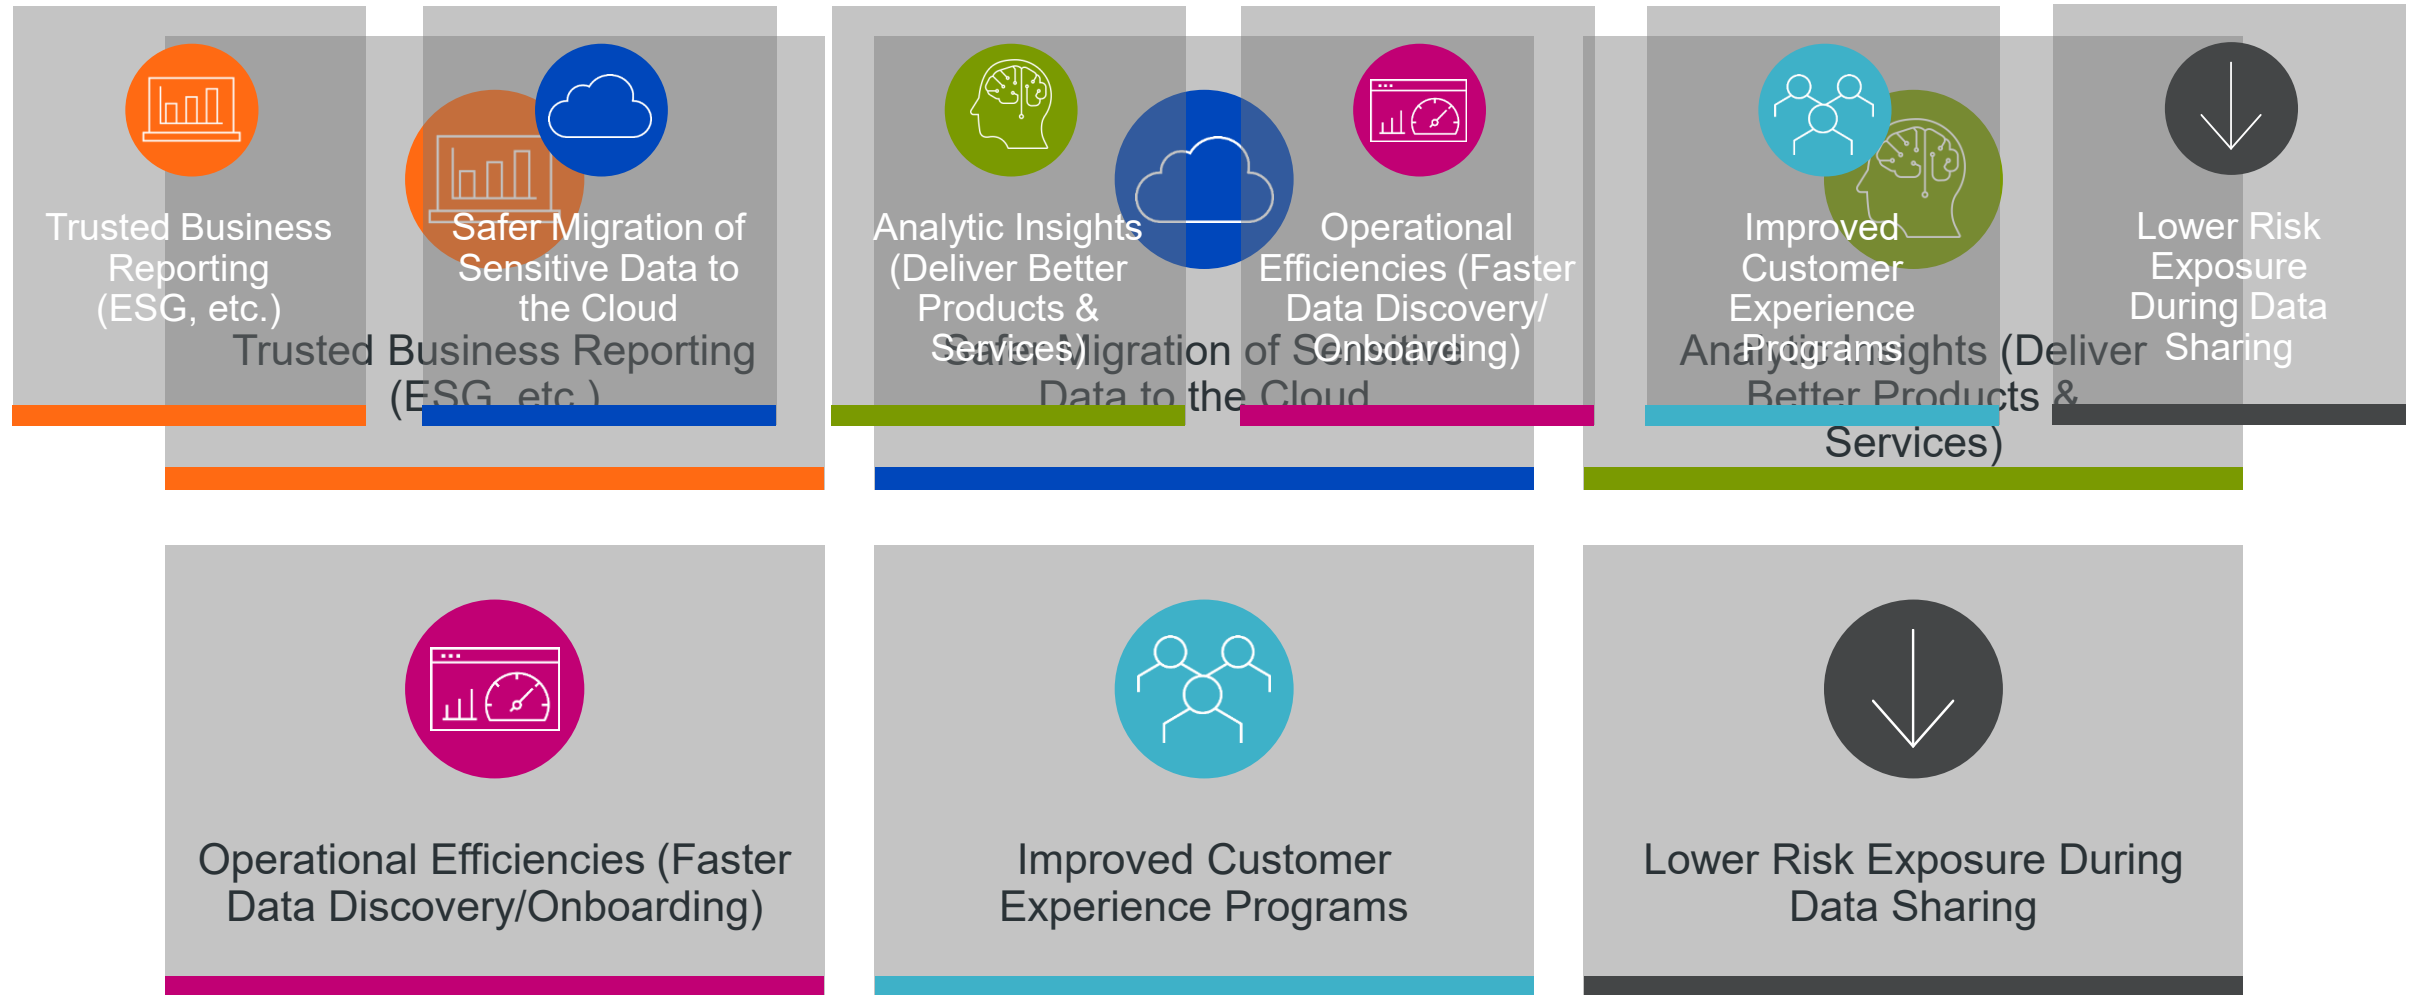

Metrics drive audits and improvements

During Data
Sharing

Deliver accurate auditing & reporting

- Improve data quality, accuracy and protection to assure trusted results
- Increase visibility into all data sources and data movement
- Deliver trusted data quickly to comply with policies within deadline
- Streamline reporting through automating processes/procedures

Modernize data and applications

- Identify on prem data sources to prioritize
- Inventory sensitive and high-risk data to protect or further disposition
- Visualize proliferation with lineage to track data movement
- Classify data intended for cloud applications
- Analyze metadata to understand impact

Fuel accurate, reliable outcomes

- Democratize data by automating access and providing delivery
- Improve data accuracy, quality and reliability for confident insights
- Understand sensitive and relevant data types
- Achieve transparency into data sources and data movements
- Apply AI and ML to accelerate insights

Increase employee productivity

- Streamline data policy, processes & procedures to drive appropriate use
- Streamline trusted data delivery for users & apps
- Reduce risk exposure for safer data handling
- Break down silos to simplify collaboration & improve data literacy
- Maximize data value by identifying relevant data sets and types

Enhance your view of your customers

- Identify and classify personal information
- Create a single source of truth for customer data to promote consistency
- Understand relevant customer data & trends for reliable insights
- Apply wisdom of crowds to improve data quality
- Deliver most applicable customer data to bus. users and applications

Comply with internal policies/procedures

- Secure & protect sensitive customer information / IP
- Manage consent for data exposure and use
- Gain visibility into data exposure and use
- Improve data accuracy and reliability when reporting on compliance
- Build data literacy and confidence to ensure fitness of purpose

How are you evolving your data strategy...
