Scalability

- World Class Informatica Cloud integration platform ensures high scalability & security
- Industry's best visualization using QlikSense provides great user experience and scalability
- Cloud Deployment – Amazon, Microsoft Azure
- On-premises Virtual Environment deployment

Time to Market

- 10X faster time-to-market
- Industry standard based tools and technologies
- Highly customizable/configurable data model, KPIs, dashboards, scorecards and data mappings
- Easy to integrate with external cloud apps

Performance

- Highly scalable data integration and visualization platform ensures high performance
- Cloud based monitoring, administration and deployment
- Easy to integrate with external cloud apps

In*o*fiscus – Infometry Finance Analytics solution delivers scalable Finance Dashboards, Scorecards and Advanced Analytics solution for NetSuite customers. In*o*fiscus is built keeping in mind the persona of C-level executives, Analysts, controllers and accounting team and the system to self-serve once deployed.

Infometry' proven finance data model, data integration layer and metadata layer makes it easy to configure, customize, deploy and maintain without having in-depth knowledge of NetSuite data model.

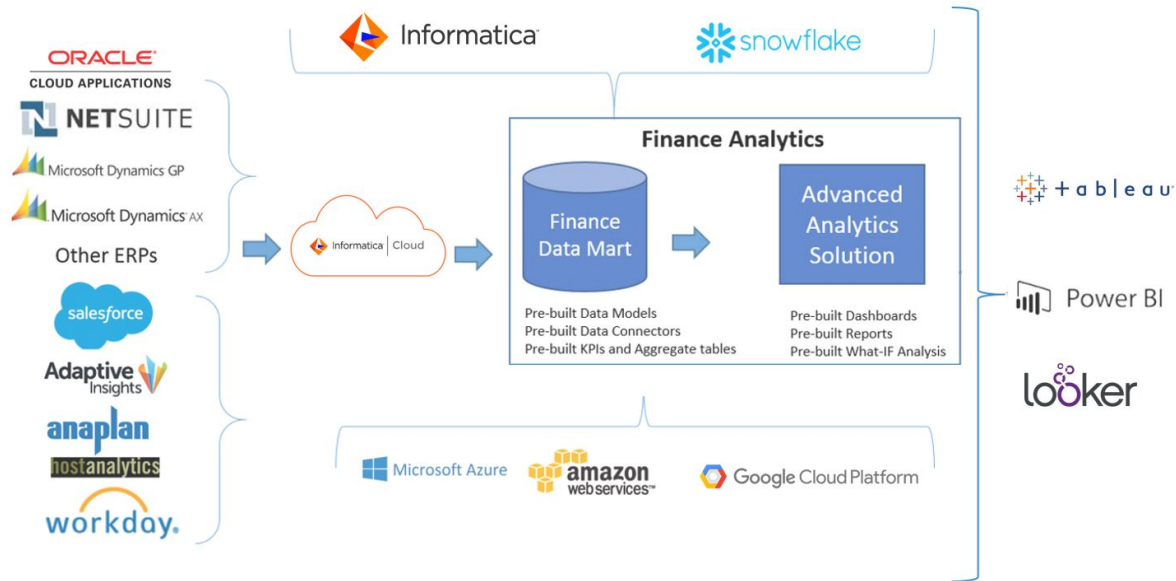

FOCUS AREAS

In*o*fiscus supports wide range of analytics and reports including CapEx, OpEx, Balance Sheet, Profit & Loss, Profitability, Fixed Assets, Cash flow, Gross Margin, Revenue. In addition, the solution also support Accounts Payable (AP) and Accounts Receivable (AR) related analytics along with detail GL reports.

ARCHITECTURE

Infofiscus solution is built on a robust cloud data integration platform using Informatica IICS and a robust visualization engine from Tableau. Near real-time data refresh is achieved by leveraging NetSuite ODBC connector from Informatica Cloud (IICS) platform and Tableau for the visualization. Finance Data Model can be deployed on relational databases like SQL Server, Oracle, MySQL or Postgres.
