Name of Solution:

Informatica Developer : Add Data Summary to Footer

Business Requirement:

An Informatica Developer mapping that demonstrates calculation of summary and writing the same to the target flat file footer.

Solution URL:

https://community.informatica.com/solutions/2315
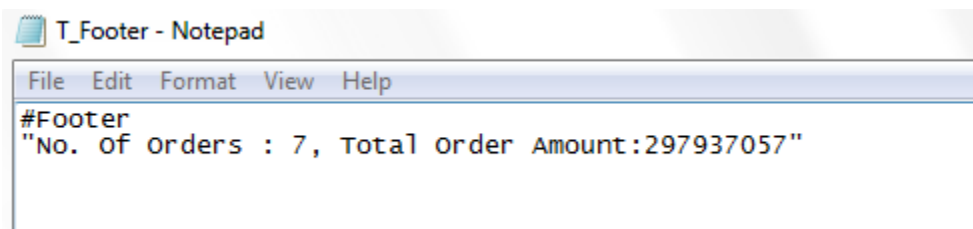

Description:

The input flat file has to be written to the target after filtering records that have zero value to "order_amt". In addition calculate summary and line has to be added to the file to summary details. This solution writes row count and order value in summary line.

Download file contents:

1. Mapping
2. Source File

Steps to implement the solution:

1. Import mapping xml to the repository, select the appropriate folder from repository and resolve the conflicts by choosing suitable option.
2. Copy the source file Customer_orders.csv into < Informatica server > \bin\source.
3. Open mapping in Informatica Developer.
4. Two target files have been created however footer of "T_footer.txt" file replicates footer.
5. Following screenshot shows footer details.

6. Validate and Run the Mapping.
